Bright Affect Learning Assistant

With the growth of mobile devices and the clear need for organisations to support employee mobility, being able to access content whenever and wherever you need it is becoming increasingly critical. It's important that training and learning content are accessible on the move.

How it works

We have developed a companion application for our online Learning Library solution that provides the capability to access eLearning content on the go. Our user-centric app' delivers high quality studio grade content when and where it is needed.

The Bright Affect mobile Learning Assistant allows users to stream video training content and view documents. Offline? No problem. We recognise that despite advances in connectivity, it's not always possible to have a great connection. And when are you most likely to need to access training? When you're not connected. That's why with the simple flick of a switch your users can download all or selected content to their tablet for use anytime, anywhere.

Simple and elegant the Learning Assistant makes full use of the multi-tasking capability of mobile operating systems. This allows users to pause what they're doing, review the training content and then return to the tools they're using without losing any work. Our mobile application makes a great companion to our online tools, supporting users, reducing support calls, and acting as a virtual trainer after you have gone live with a new system. Always on, always there providing users the information they need, when they need it.

The back-end infrastructure provides a user-friendly interface to easily manage all your eLearning content with the flexibility to quickly deploy new and amend existing materials to a remote audience.

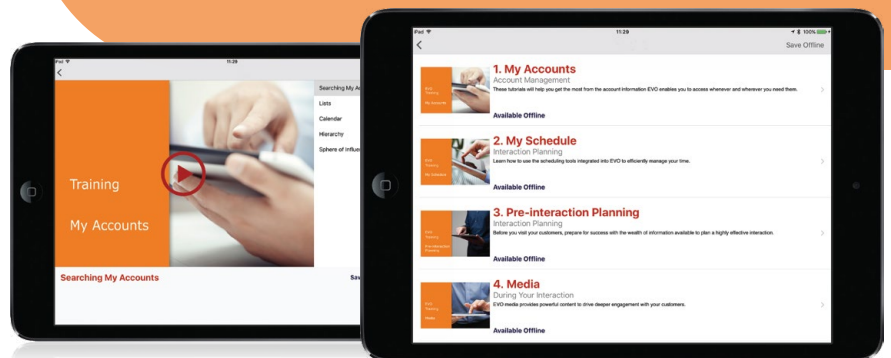

In-depth reporting provides full usage information and visibility of user engagement, giving the business insight into what your audience are consuming, and identifying gaps in content or areas for improvement. In addition, feedback mechanisms within the app' empower users to comment on the training materials, making it inclusive, and giving them the chance to help shape future learning content development.

Learning Assistant Features

- User-friendly interface
- Easily download full subjects, courses or just selected tutorials
- Custom branded to adhere to your company brand guidelines
- Facilitates deployment of your developed content through multiple tools
- Multi-lingual capability
- Provide links to additional learning content either within the app or external sources
- No limits to the number of courses and tutorials that can be added
- In-depth reporting capability

Learning Assistant Benefits

- Ability to download learning material locally ensuring content is available anywhere, anytime
- Simple, intuitive and user-centric design ensures high usage and adoption
- Allows users to complete learning when it suits them
- Facilitates the delivery and consumption of bite-sized content, aiding the learning process and enabling re-reinforcement of knowledge gaps
- Quick access to just the content that's needed
- Maximises content ROI enabling consumption through multiple channels
- Reduces support calls and acts as a virtual trainer after go-live
